ABSTRACT OF THE PROJECT:

A 4-bit sequence generator using D flip-flops is a sequential digital circuit designed to generate a binary counting sequence from 0000 to 1111 (0 to 15 in decimal) in synchronization with a clock signal. The circuit uses four D flip-flops, where each flip-flop represents one bit of the binary sequence. The D flip-flops are arranged in a chain to form a binary counter, with the output of one flip-flop connected to the input of the next.

The circuit is driven by a clock signal that triggers state changes on each rising edge, making the output increment by 1 with each clock pulse. A reset signal is used to initialize the flip-flops and set the output to 0000, ensuring the counter starts from the beginning of the sequence. As the clock progresses, the circuit produces a continuous binary count, which can be used in applications like timers, counters, or sequence detection.

This design is fundamental in digital electronics, providing a basic yet versatile method for generating binary sequences. The simplicity and efficiency of D flip-flops make this approach ideal for implementing small-scale binary counters, often used in microcontrollers, digital clocks, and other timing-related circuits.

CIRCUIT DIAGRAM:

MAIN VERILOG CODE:

sequence_generator.v

```
module sequence_generator (  
    input wire clk,  
    input wire reset,  
    output reg [3:0] count  
);  
    always @(posedge clk or posedge reset) begin  
        if (reset) begin  
            count <= 4'b0000;  
        end else begin  
            count <= count + 1;  
        end  
    end  
endmodule
```

TEST BENCH FILE:

```
`timescale 1ns / 1ps  
module tb_sequence_generator;  
  
    reg clk;  
    reg reset;  
    wire [3:0] count;  
    sequence_generator uut (  
        .clk(clk),  
        .reset(reset),  
        .count(count)  
    );  
    initial begin  
        clk = 0;  
        forever #5 clk = ~clk;  
    end  
    initial begin  
        $monitor("Time: %0t | Reset: %b | Count: %b", $time, reset, count);  
        $dumpfile("sequence_generator_tb.vcd"); // Set output VCD file name  
        $dumpvars(0, tb_sequence_generator); // Dump variables in the current  
module  
        reset = 1;  
        #15;  
        reset = 0;  
        #300;  
        $finish;  
    end  
endmodule
```

SCREEN SHOT OF THE OUTPUT:

```
mona@mona-Inspiron-15-5510:~$ verilog -o a sequence_generator.v tb_sequence_generator.v
mona@mona-Inspiron-15-5510:~$
mona@mona-Inspiron-15-5510:~$ vvp a
